ANICE

M. DCC XLVII

1 2 3 4

~AVERTISSEMENT

A funplicité et le petit nombre de Remedes sont le caractere de la veritable Medecine, Le fatras de Medicamens, souvent contradié incement oposes les uns aux autres, ne s'accorde point avec des veiles simples, nettes, b precises, telles que les grands Medecins s'en forment des Maladies qu'ils ont a tratter.

"Il faut tres peu de chose pour exciter de grands derangemens dans l' exconomie animale de l'Homme: E il faut aussi tres peu de chose pour produir de grands succes dans le retablissement de la sané. Tout l'Art consiste dans le disservement des circonssances, la deconverte des verita-

bles causes, & la juste application des moyens de guerir.

Cerreflexions, qui conviennent a la Medecine en general, regardent bient plus particulierement la Medecine militaire; Parcequelle trouve des refources infinies dans la conflituiton robufte des Soldats, dont les corps endurcis par le travail d'else Exercices violens, n'exigent que tres peu sie remedet, d'esplus simples, pour ayder la nature dans ses operations, sie remedet, d'esplus simples, pour ayder la nature dans ses operations.

On ne propose donc ici, pour l'usage des Hopitaux à Armée, q'un petit nombre de remedes, simples dans seur composition, faciles à trouver,

o dont la juste application doit faire le principal merite.

Celt suivant les mêmes vites qu'est compose le Traité de la Medecine militaire, contenant dans le plus grand detail les moyens de conserver la Santé & de guerir les maladies des Gens de Guerre: Ouvrage que l'on se propose de publier incossimente.
